MEMBERS

Feature
loading a sample graph
saving in Mermaid format
creating SDDs for part 2
Partitioning into classes using Tarjan's algorithm
Links between classes, Hasse diagram
saving the diagram in Mermaid format
transforming a graph into a matrix
creation of sub-matrices for each class
calculation of stationary distribution for a class

skill
understand how lists work
design and use stacks and queues
design and use trees
write a complete algorithm
use recursion
write a function in C language
use .h header files in C
understand and correct errors in a C programme
Read existing code and reuse it
possibly use an AI tool to code

8
Data structure 2 - project (markov graph)

Raphael Gastaldo
Daccache Hadi
Johannel Alexandre
Rubem Adrian

Which activities in the module enabled you to make this progress, if applicable?
Creation of structure AdjList and management of EdgeCell in part1
implmentation of the stack (IntStack) used for for Tarjan Algorithm
understand hierarchy of classes thanks to the diagram of hasse (tree strucure of components)
writing of tarjanVisit (depth_first search)
overall project structure
use of part 1 function in part 3 (for matrix calculation)
of AI to generate the body (or the squeleton) of matrix functions, explain and debug part of the code
